Portfolio — Github — linkedin

PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building web applications using Java, Spring Boot, React.js, and REST APIs. Developed secure authentication systems using JWT, integrated WebSocket-based real-time communication, and worked with MySQL and MongoDB databases. Built and deployed end-to-end projects with strong understanding of backend development, frontend integration, and client-server architecture.

EDUCATION

B.Tech – Computer Science and Engineering	2022 – 2026
Sri Venkateshwara College of Engineering and Technology, Chittoor	CGPA: 7.96
Intermediate (Class XII)	2020 – 2022
Vagdevi Junior College	Percentage: 71%
SSC (Class X)	2020
Sri Vengamamba High School	Percentage: 99%

TECHNICAL SKILLS

Programming: Java, JavaScript

Backend Development: Spring Boot, REST API's, JWT Authentication, Hibernate (JPA), WebSocket Integration

Frontend Development: React.js, HTML5, CSS3

Database Technologies: MySQL, MongoDB

Tools & Platforms: Git, GitHub, Postman, VS Code

Core Concepts: Data Structures & Algorithms, Client-Server Architecture

EXPERIENCE

Study Group Finder — Full Stack (Infosys Springboard) GitHub

- Built a full-stack platform enabling users to create and join study groups using Spring Boot and React.js.
- Designed and implemented REST APIs for authentication, group management, and messaging workflows with structured request-response handling and proper HTTP status codes.
- Implemented JWT-based authentication with Spring Security including token validation and role-based access control for secure endpoints.
- Integrated WebSocket-based real-time chat for instant message delivery without repeated client requests.
- Designed relational data models using Hibernate (JPA) with entity relationships (OneToMany, ManyToMany) to efficiently manage users, groups, and memberships.
- Developed responsive frontend using React.js integrated with backend APIs for seamless user interaction.

PROJECTS

WanderAI — Travel Planning Web Application Live

- Developed an AI-based travel planning application using React.js and external APIs.
- Integrated Groq AI API for dynamic itinerary generation with structured prompt handling and response parsing.
- Fetched real-time weather data using OpenWeather API with error handling for failed API responses.
- Managed asynchronous API requests and optimized state handling for smooth frontend performance.
- Designed responsive UI and deployed application on Netlify.

Task Management Application — Full Stack Project GitHub

- Developed a full-stack task management application using Angular, Node.js, Express.js, and MongoDB.
- Built REST APIs using Express.js to handle task creation, updates, and retrieval.
- Implemented JWT-based authentication and middleware for secure access control.
- Enabled structured communication between frontend and backend using HTTP requests.
- Tested and validated API endpoints using Postman to ensure accurate request-response handling.

CERTIFICATIONS

- **Java Foundation Certification** — Infosys Springboard
- **Full Stack Development Internship** — BLACKBUCKS (APSCHE)
- **Software Engineering Job Simulation** — JP Morgan Chase (Forage)
